## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 recites the limitation "the proximal end side" in line 2. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily

Art Unit: 3763

published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Riitano, 6,079,979. Riitano discloses a barrel, see column 5, line 18, which is provided with a nozzle mounting portion at a distal end thereof; a plunger which is provided with a gasket capable of sliding hermetically along an inner wall of the barrel at a distal end thereof and inserted from a proximal end of said barrel, see column 5, line 18; and a nozzle (20) which is freely detachable with said nozzle mounting portion, wherein said nozzle includes a mounting portion on the proximal end side which is provided with means for mounting to said nozzle mounting portion, see column 5, lines 19-22, and a discharging portion which extends bending at a predetermined angle from this mounting portion, see Figure 2.

As to claim 2, the mounting portion of the nozzle and the nozzle mounting portion of the barrel are formed so as to enable a luer lock, see column 5, lines 19-22.

As to claim 3, the nozzle mounting portion comprises a distal end tip that engages with the inner cavity of the nozzle and female threads which are disposed concentrically on the outside of the distal end tip, and said female threads are constituted so as to screw together with male threads disposed on the proximal end of the nozzle, see column 5, lines 19-22.

As to claim 4, the female threads are integrally formed with the barrel, see column 5, lines 19-22.

As to claim 5, the female threads are disposed in a freely rotatable condition on the outer wall of the barrel, see column 5, lines 19-22.

As to claim 6, Riitano discloses a mounting portion (i.e., proximal portion of syringe, see column 5, line 18) on the proximal end side which is provided with means for mounting to a tip of a barrel, see column 5, lines 19-22; and a discharging portion which extends bending at a predetermined angle from this mounting portion, see Figure 2.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Discko, Jr. 5,267,859, discloses an angled nozzle. Fischer, 4,986,820, discloses a luer lock at the end of a syringe tip.
